in the world six consecutive times – an industry first

We are fortunate to work at the heart of today's major transformations, to contribute to development in every industry, and to help simply make our planet a better place. And we do this as we have always done at Capgemini: with passion and energy, and all together."

Aiman Ezzat
Chief Executive Officer

Who we are

Capgemini is a **global business and technology transformation partner**, helping organizations to accelerate their dual transition to a digital and sustainable world, while creating tangible impact for enterprises and society.

It is a responsible and diverse group of 340,000 team members in more than 50 countries. With its strong over 55-year heritage, Capgemini is trusted by its clients to unlock the value of technology to address the entire breadth of their business needs.

It delivers end-to-end services and solutions leveraging strengths from strategy and design to engineering, all fueled by its market leading capabilities in AI, generative AI, cloud and data, combined with its deep industry expertise and partner ecosystem.

We are driven by our purpose...

Unleashing human energy through technology for an inclusive and sustainable future

**“Together we can give technology
that human touch the world needs.”**

Aiman Ezzat, Chief Executive Officer

...guided by our values...

“Our values are at the heart of the company and have become its hallmark: an entrepreneurial spirit above all else, respect for all cultures, and love for our clients.”

Success stories

Together towards net zero

Capgemini is contributing a reduction of one megaton to support an ambitious goal set by Eneco, an international energy company committed to accelerating the energy transition. Based in the Netherlands, Eneco's aim is to cut its scope 1, 2, and 3 CO₂ emissions by roughly 6-7 megatons by 2030. The partnership will accelerate their transition to net zero in 2035 and help the company retain its leadership in renewable energy.

Reducing scope 3 CO₂ emissions is challenging since they cannot be easily measured and are so often tracked simply in trends. For Eneco, Capgemini used comprehensive carbon calculation models to assess the ability of the company to cut these emissions, which are generated from indirect sources within its supply chain, such as purchased goods and services, distribution, transportation, the use of sold products, all of which represents 90% of Eneco's total output.

The major sustainability project is part of Eneco's ambitious "One Planet" plan to become carbon neutral by 2035. Long considered a leader in sustainable energy, Eneco found itself challenged by other players and decided to set itself an ambitious but credible carbon reduction target. The company brought in Capgemini because we share a commitment to carbon neutrality and benefit from a long working relationship. Eneco has identified three main paths to reducing its partners and customers' carbon footprint: radical electrification, phasing-out natural gas and accelerating sustainable heat solutions.

For each of these, the company will use Capgemini's expertise in data, digital and engineering through joint initiatives designed to reduce the footprint of Eneco's partners.

The partnership is based on flexibility and a continuous dialogue to determine what works and what does not. In a first phase three major projects are being evaluated. The first is B2B decarbonization services to help Eneco's business customers further reduce their carbon emissions with solutions such as heat pumps, insulation, smart office lighting, solar boilers, and solar panels. Capgemini is providing Eneco with the digital tools it needs to come up with new offers in these areas, define a marketing strategy and translate it into a service road map.

The next step is customer phasing and setting up a partner network.

The second project is a virtual power plant or a digital platform that will help to balance renewable energy supply and demand, to prioritize sustainable energy sources, and to reduce volatility in the energy mix –

wind, sun, gas and coal – since in the future it will not be possible to balance the grid with coal and gas.

Finally, digital twins will reduce the costs of constructing and operating onshore and offshore windfarms. Currently at the proof-of- concept stage, this will involve a 3D model of all the windfarms in the Netherlands so that Eneco can get 360-degree information on how they are performing, identify issues quickly, analyze and respond to any problem. This will save costs, since there will be no need to send people to check in person and it means maintenance can be carried out even in the winter months, when the assets cannot be physically accessed.

These innovation areas will evolve over time as the two partners continue to reevaluate their ability to reduce scope 3 emissions. Ultimately, the partnership will enable Eneco to make data-based decisions on how to best get to carbon neutrality.

"We were already partners in a successful working relationship, and we found out that Capgemini also had ambitious targets to help its clients reduce their carbon emissions. There was a lot we could do together. Capgemini's technology and innovation capabilities, as well as its global reach, is helping us in this first step on our journey towards net zero. By reinventing ourselves with Capgemini, we are convinced we will come out of this energy transition not only as a front runner but also as a very healthy business."

Erwin Leeuwis,
Director of Corporate Strategy, Eneco

Digitalization for better healthcare

Digitalization is key to the evolution of healthcare, improving dialysis and other patient care and making high-quality healthcare accessible to more people.

Capgemini is helping Fresenius to digitalize its IT systems. Fresenius Group CIO Ingo Elfering explains how it works.

Why did Fresenius choose to work with Capgemini?

Ingo Elfering: Fresenius is a global healthcare group offering high-quality products and services in the areas of dialysis, generics, biopharmaceuticals, nutrition, MedTech devices, hospitals, and outpatient treatment. A clear focus on innovation and efficiency will help us to make high-quality healthcare accessible to an ever-growing number of people. We must gain greater flexibility for upcoming market and business changes and acquire new capabilities to keep pace with the digitalization of our industry. In addition, artificial intelligence and data analytics will play a vital role in the future of healthcare, for example to support physicians, gain insights into treatments and optimize our supply chains. We also wanted a partner with a global footprint that would be highly motivated, and attractive to our transitioning employees. Capgemini, with its experience in large-scale business transformation, is the perfect partner for us.

Do you have concrete examples of how this could improve patient care overall?

I. E.: Patient care will be improved in several ways. First, further digitization of internal processes, starting with reducing paperwork in the in-center treatment or in hospitals, where it can free up nurses' time to spend with patients. Second, our manufacturing process, which already uses robotics, will become more automated and rely on greater data insights for optimization. More advanced software will improve our MedTech products. Data analytics is already helping us by providing suggestions for care.

Why did Fresenius feel the need to transform its IT operations?

I. E.: Our IT was too complex, with decentralized processes, many small vendors and partners, and disparate and often local solutions.

Now we are moving our data centers to the cloud and improving our customer experience in the workplace. We are refocusing on what we want to do ourselves and where we want to leverage flexible partnerships. Fresenius will now have the necessary foundation to create new digital solutions for MedTech and services with state-of-the-art IT, creating value through cost efficiency, global operations and much more agility based on a strong foundation.

Now that you have embarked on this transformation journey, what does the future hold for Fresenius?

I. E.: We needed to modernize our IT because it has become an integral part of our business. With a modernized management of our IT systems, we are now better able to offer global services on a large scale and integrate new services and capabilities into our business. By driving digitalization, we can respond flexibly to business changes and unleash innovation potential for better healthcare.

“Trends in our industry are linked to digitalization in general, often using data to develop new services, for example in home delivery, decision support, therapies and even developing new digital business models. Given our scale, intelligent operations in supply chain management and production are also key focus areas.”

Ingo Elfering,
Group Chief Information Officer,
Fresenius

Growth, technology and sustainability

The world of banking is experiencing a continuous and accelerated evolution.

This is necessary in order to maintain a primary role in the face of new and modern operators already active in traditional banking activities. This evolution will also allow for financial sustainability in a challenging and complex international economic context and will attract customers – serving them in a better way, by understanding their ever more advancing needs. CEO Elena Goitini explains how BNL BNP Paribas is getting future-ready today.

How is the competitive banking landscape evolving for BNL and what challenges are you looking to address?

Elena Goitini: Our goal is to become a more agile and interconnected bank, able – in an open banking mindset – to develop synergies with operators also from other industries, by building ecosystems to answer to the current and future needs of customers. The transformation of IT services is one of the enabling factors of the BNL 2022-2025 business plan called GTS (Growth, Technology, Sustainability).

Why did BNL BNP Paribas choose to work with Capgemini?

E. G.: Capgemini is a global leader in business and technological transformation and has been a strategic partner of ours for 20 years. This partnership is aimed at accelerating further the digital evolution of the bank. Through the creation and the constant enhancement of a modular platform of cutting-edge core banking services which is cloud-based and open to future additions, we will be able to respond to our business and customer needs. It also invests in the development of our people as active change agents through the creation of new skills and an interaction that adds value through cross-collaboration. The road has been traced, the direction is mandatory: the challenge is the ability to make these changes.

I remember a book I read a few years ago, *Human + Machine* about work in the age of artificial intelligence (AI). The main thesis lies in that “+” sign related to the concept of partnership, such as that of BNL and Capgemini, which aims to maximize the value of AI in the workplace.

“Our goal is to become a more agile and interconnected bank, able to develop synergies with operators from other industries by building ecosystems to answer the current and future needs of our customers.”

Elena Goitini,
Chief Executive Officer of BNL
and Head of BNP Paribas group in Italy

Clients stories

What if AI was our best ally in ensuring our favorite pet's wellbeing? Nestlé Purina's innovative spirit and profound expertise in the pet industry led them to partner with Synapse and Cambridge Consultants (both part of Capgemini Invent) to develop and launch the Petivity Smart Litter Box Monitoring System, a sophisticated device ecosystem that enables pet owners to better understand and care for their cats. This strategic collaboration was pivotal in achieving an offering that is worthy of the Purina brand, while also being a viable new business line. Our involvement extended beyond the technical solution, as we helped shape new business, pricing, and operational models that deliver substantial value to Purina and its customers, propelling the brand into a new era of connected, customer-centric pet care.

AIRBUS

The aerospace and defense industry is confronted with new challenges: implementing strategic and innovative programs – with shorter development timelines, while concurrently exerting greater control over its environmental and regulatory impacts. We supported our long-standing client Airbus, a leading aircraft manufacturer, in its ambitious DDMS (Digital Design, Manufacturing & Services) initiative that takes a digital-first approach to the way aerospace products are designed, manufactured and operated. We drew on our dual IT and business expertise in Intelligent Industry to support Airbus in maintaining digital continuity and ensuring the efficiency, coherence, orchestration and compliance of new products brought to market, industrial resources and associated services. In France and Germany, this approach has supported Airbus in digitalizing and revamping previous A380 hangars to facilitate A321XLR production without disruption.

To achieve BNPP's goal of maintaining its leading position and being at the cutting edge of innovation and new services, its French branch BCEF launched DITA, a unit focused on innovation. Since 2021, frog, part of Capgemini Invent, has supported DITA in exploring new trends, conducting 10-week innovation sprints to validate strategies, and implementing acceleration projects to refine and enact changes. More than ten projects have been completed in the last three years, drawing on our banking, technological and organizational expertise to devise cutting-edge solutions. For example, in 2023 our teams contributed to the set-up of three major projects within BNPP: *Mobility 4you*, a platform that offers private customers mobility solutions, as well as the associated financing and insurance services, combining the BNPP Group's strengths in banking, credit and mobility; *My Private Assets*, a service that gives private banking clients access to private equity investment opportunities; and *G.ARI*, an employee knowledge management tool using gen AI, which is being deployed in 2024.

Eramet's partnership with Capgemini has led to a groundbreaking transformation at its mining subsidiary, Grande Côte Opérations (GCO) in Senegal. Through the integration of artificial intelligence, they have developed the "Connected Concession" platform, which enhances mining operations and significantly improves the efficiency of land mapping and reforestation efforts. This innovative approach has increased vegetation inventory capacity more than tenfold and reduced mapping time from hours to minutes. The collaboration uses advanced AI and computer vision technologies to facilitate real-time data processing, enabling effective land rehabilitation and promoting biodiversity. This initiative not only optimizes operational efficiency, but also demonstrates a strong commitment to environmental sustainability.

Clients stories

What if a software solution could help our clients accelerate their growth and even strengthen their leadership position in their ecosystems? That's what we did for Symbio, a Michelin-Forvia-Stellantis company and expert in hydrogen mobility. To speed up software delivery and comply with automotive standards such as A-Spice, our teams provided both consulting services and pure engineering expertise, with the development of an external embedded software capability. The partnership will be extended to other geographical areas.

Our client, a British universal bank, wanted to modernize its sell-side investment research platform, targeting a top 5 global ranking. The original platform suffered from outdated features, disorganized content, and poor navigation – ultimately diminishing user engagement and the bank's image. Capgemini's overhaul focused on improving client experience through modern design, personalized real-time data, and user-centric functionality, based on client feedback. This revamp not only upgraded the bank's brand and interface but also offered deeper, instant insights and enhanced decision-making through a more integrated, scalable system. The initiative opened new revenue streams, improved cross-channel integration, increased personalization, and established a strong architectural base, significantly elevating the bank's investment banking status and market reputation.

Nespresso SA, a pioneer in the coffee industry, embarked on a transformative journey with Sogeti, part of Capgemini, to enhance its operational efficiency and customer service. Targeting their after-sales service, Nespresso leveraged Microsoft Power Apps to develop a service toolkit application aimed at streamlining customer interactions and data management processes. This strategic partnership, initiated in 2021, aimed to reflect Nespresso's premium brand essence in every customer touchpoint. The collaboration brought about remarkable outcomes, including a 30% reduction in after-sales service times and an impressive annual ROI. The Power Apps solution, operational within just two months, improved the brand's visibility within the Nestlé Group. Key to the project's success was our expertise in governance, architecture, and agile methodologies, which ensured seamless implementation and user adoption of the new system. By simplifying the process of identifying and resolving machine issues, Nespresso has accelerated its service delivery and reinforced its commitment to providing an unmatched customer experience.

The Electricity System Operator (ESO) for Great Britain identified that there might be exceptional electricity supply challenges across Europe during the winter of 2022-2023 due to the instability created by the war in Ukraine and, as a prudent system operator, they wanted additional tools available to mitigate the risk. In response, the ESO launched the Demand Flexibility Service (DFS) to encourage households and businesses to reduce their power consumption during periods of peak winter demand. Our teams led this cross-ESO initiative, which involved designing and implementing necessary processes, tool and data changes, and overseeing the project from start to finish. Launched in just four months, DFS attracted 31 providers, benefiting over 1.6 million homes and businesses. From November 2022 to March 2023, the service was activated 22 times, successfully preventing blackouts and reducing the need for additional fossil fuel use. This initiative not only ensured a stable and balanced electricity system in Great Britain throughout this period of high demand pressure, but also saved 760 tons of CO₂ emissions, highlighting its environmental benefits.

With global supply chains encountering growing volatility, businesses face myriad challenges that jeopardize their operational efficiency and resilience. Capgemini identified a significant opportunity to bring stability and agility to the forefront of global supply networks. This led to a strategic alliance with Kuehne+Nagel, addressing key challenges such as fragmented operations, limited visibility, and inefficient coordination that often culminated in reduced resilience and increased operational costs. Capgemini's solution underscores its position as a trailblazer by integrating Kuehne+Nagel's logistics prowess with its own advanced AI and data analytics capabilities, crafting a holistic, end-to-end supply chain service. This partnership not only streamlines operations but also fosters sustainable practices within the supply chain, marking a significant leap towards achieving resilient, efficient, and environmentally responsible logistics solutions. Through this collaborative effort, Capgemini and Kuehne+Nagel are setting new standards in supply chain management, ensuring that their clients can thrive amidst the complexities of today's global market dynamics.

Clients stories

L'Oréal

France

Augmenting the customer experience through digital twins

Imagine buying a beauty product and having key information – such as its ingredients, usage tutorials and visualizations of its intended results – easily accessible on your phone. Working with Capgemini, L'Oréal implemented a solution based on Google Cloud for the necessary tools and systems to support scannable QR codes on cosmetic products that connect to their digital twins, giving real-time answers to consumers' questions. The result is more transparency and an even more engaging customer experience in the highly competitive beauty and cosmetics market. For L'Oréal, the solution provides information on consumer uses and preferences that will be particularly useful in developing new products.

In the metaverse

United States

Developing next-gen immersive experiences

The metaverse is moving beyond its "hype cycle" to real use cases in the enterprise world. To overcome the limitations of the size and weight of virtual reality glasses, silicon chips must be improved for faster processing, better imaging and sound, and better connectivity, all at a lower power to improve battery life. Capgemini engineers are working with an American multinational company to develop the innovative semiconductor chips required to power the next generation of VR headsets for great immersive experiences.

Hyliko

France

Decarbonizing transportation with hydrogen

Hydrogen is the ideal alternative energy source for heavy-duty mobility, particularly suited to energy-intensive and long-haul usages. Making the transition to hydrogen quickly and efficiently, however, is a challenge for the freight transport industry. Working with industrial investment company Kourou, Capgemini including design teams from frog, part of Capgemini Invent, secured Hyliko launch, an innovative mobility service platform for decarbonizing heavy-duty mobility with hydrogen. Their offer integrates green hydrogen, including "super-green" hydrogen produced from biomass, truck leasing and maintenance, and an access to their own network of stations for an in-depth carbon impact reduction of one of the most difficult sectors to decarbonize. Our team refined the new venture's business model, investment case, and go-to-market strategy. More recently, our engineering teams have been contributing to the architecture of the first trucks. An end-to-end success story leveraging our capability to hybridize our variety of competencies.

KLM

The Netherlands

How do you train pilots without flying?

KLM, the Dutch national airline part of Air France-KLM, and Sogeti, part of Capgemini, have developed a digital cockpit where pilots with virtual reality (VR) goggles can experience a realistic cockpit. They can also inspect the plane inside and out. Testing this VR cockpit was a challenge, but KLM and Sogeti built a machine learning (ML) agent that automatically tests in seconds, so that training can run smoothly. Pilots can now do a large part of their training hours virtually, on the ground. The virtual cockpit and ML agent not only ensure a higher quality of training, but also create significant time savings and a more sustainable approach to flight training.

Clients stories

Panasonic Automotive

United States

A revolution in data-driven driving

Capgemini created a data ecosystem for longstanding client Panasonic Automotive Systems Company of America. Panasonic Automotive is a division of Panasonic Corporation of North America specializing in innovations that are revolutionizing the driving experience. The new platform will improve the organization's capabilities in data-driven decision-making and innovation to create efficiencies and more reliable extracts. This new data lake architecture solution provides a solid, stable foundation for the data team and utilizes data from across Panasonic Automotive's business units to centralize their wealth of information. This results in more reliable data extracts in a much shorter time frame, setting the organization up for future artificial intelligence and machine learning use cases.

Takeda

Japan

Connecting business data to drive growth

Capgemini was chosen by Takeda, a global biopharmaceutical company, to drive a globalization process with the goal of creating harmonized business processes and simplifying their IT landscape to a single instance of SAP. The benefits impact both financials and operations. Now Takeda has integrated, consolidated financials from all of its locations around the globe. Operations have better intercompany planning and supply-chain capabilities. Establishing a common system of record and backbone for the company has also allowed for the massive acceleration in RPA (Robotic Process Automation) across the company.

Jungheinrich

Germany

Moving to a circular economy

On its journey to climate neutrality and the circular economy, Jungheinrich, the leading solutions provider of intralogistics, wanted to achieve transparency on its scope 1, 2 and 3 emissions. They also wanted to gain insights into the environmental impacts generated in the life cycle of selected products. Capgemini helped Jungheinrich determine its Corporate Carbon Footprint (CCF) in a three-step process (screen, collect data, and calculate) and conducted a Life Cycle Assessment (LCA) for selected products.

Global financial institution

United Kingdom

Accelerating to net zero through new ways of working

Employees of one of the largest banking and financial services institutions in the world, have gained access to a full suite of modern digital collaboration tools that facilitate a hybrid work environment, thanks to a partnership with Capgemini. The migration to the cloud using the Microsoft 365 suite of products allows the bank's 275,000 employees across 69 markets to work across devices from any location – creating a more flexible work experience and providing an enhanced employee experience. The transformation is also preparing the company for future innovation and thanks to the reduction in travel and sent emails, it is a step towards their net-zero ambition.

CUSTOMER FIRST

Accelerating E-commerce with a slam-dunk redesign

In early 2020, we partnered with FILA to re-engineer the brand's North American online presence. Using data and personalization, we transformed the site into a sophisticated D2C analytically driven e-commerce site, delivering 1:1 customer experiences with unique storytelling capabilities.

Capgemini's work helped FILA achieve a triple-digit increase in conversion rates, significantly reduce bounce-rates, and improve engagement across key metrics including time-on-site and page views per session.

"Capgemini is an extremely valuable partner that quickly implemented a strategic digital transformation solution that has already resulted in +100 percent growth in year-to-date revenue."

Dawn Trenson

Vice President of
eCommerce, FILA

Optimizing monitoring and maintenance of rail lines

SNCF Réseau needed to optimize the monitoring and maintenance of all its 30,000 kilometers of tracks to improve performance and meet growing demands for mobility.

Capgemini helped by developing an innovative application to localize incidents on a dynamic map, identify the right maintenance contact, and guide staff precisely to where to fix any problems.

This shift from systemic maintenance to real-time maintenance will make it possible to improve not only incident handling and traffic flow, but also passenger communications.

“Overall, we are going to move from very systemic maintenance to maintenance that is closer to needs, more precise, and in real time: network maintenance in the right time and in the right place. It’s another step towards a high-performance network!”

Olivier Bancel

Chief Operations
Officer, SNCF Réseau

Planning for growth with a move to SAP S/4hana

A leading global supplier of systems and components for the automotive industry, Cooper Standard wanted to standardize business processes and centralize data around the world with a single instance of SAP.

The company decided that it would move 20% of its plants directly to SAP S/4HANA without waiting to migrate to SAP ECC to avoid causing major disruption to the business.

To do this, Cooper Standard and Capgemini used a highly successful factory model. The power of SAP technology and some creative thinking from Capgemini meant Cooper Standard had the ability to shift strategy so they could focus on growing their business and exploring new opportunities.

“Capgemini is very flexible for our business. I need to have a partner that is flexible, understands my business, and comes to the table with solutions that can be maximized.

They bring us new innovations and new processes that work for our company.”

Soma Venkat

SVP & Chief Information Technology Officer,
Cooper Standard

Uncovering innovations to help Europe achieve net zero

Founded by Bill Gates, Breakthrough Energy commissioned Capgemini Invent to find scalable solutions to power Europe's energy transition. The resulting report sets out 55 "technology quests:" bold ideas and frameworks that could play a part in delivering a net-zero Europe by 2050.

These have the potential to create a €79 billion annual market of net-zero goods and services, reduce emissions by 871 MTCO₂, and create nearly 13 million jobs by 2030.

"We need to build the future European corporations that will drive sustainable growth and build clean markets. Clean technologies and environmental objectives are central to reach climate neutrality."

Ann Mettler

Vice President, Europe,
Breakthrough Energy

CLOUD

///ACTION

Preparing for growth

Action, the fastest growing non-food retail chain in Europe, has an impressive ambition based on expanding its store network and markets. To do it, it needed a cost-efficient IT landscape with sufficient capacity, flexibility, and innovative power. It wanted to be able to develop and implement new IT solutions even faster.

A trusted strategic partner since 2017, Capgemini helped Action migrate from a private to a public cloud platform with Microsoft Azure.

The cloud facilitates rapid and flexible growth in Action's number of stores and distribution centers on the one hand, and the development of existing and new applications on the other. Action can act very quickly in accordance with its strategy.

"For our internal organization, it was an invisible transition resulting in an incredibly fast-reacting landscape that gives us the required degree of flexibility."

Jens Burgers

Director Technology & IT, Action Service & Distributie B.V.

CYBERSECURITY

Driving innovation through digital, cloud, and applications

Capgemini provides cybersecurity consulting services to the Financial Services Compensation Scheme (FSCS), the UK's compensation fund of last resort for customers of authorized financial services firms, which protects consumers should such a financial institution fail.

Capgemini performs a range of cybersecurity services including IT security assessments and attack simulation testing – additional services include Security Operations Centers and penetration testing.

"I am absolutely delighted that we will be working with Capgemini as our strategic technology partner who I know will help us rise to the challenges ahead."

Paul Brocklehurst

Chief Information Officer at FSCS

DATA AND AI

UNILEVER

Putting real-time consumer insight at the center of decisions

Capgemini partnered with multinational consumer goods company Unilever to develop and deliver its People Data Centre (PDC). A critical engine in Unilever's digital transformation, the PDC uses advanced AI, data, social and business analytics to put real-time consumer insight at the heart of the business' decision-making.

Today, the PDC capability operates in 37 locations, across 28 languages, so far delivering more than 12,000 insights services to the business. By organizing this capability in-house, Unilever has generated year-on-year savings of more than 30 million euros.

MANUFACTURING

AIRBUS

Moving toward the future of helicopters

Capgemini and Airbus, a global leader in aeronautics, space and related services, joined hands to work towards a future where helicopters could be controlled by automatic systems.

Capgemini partnered with Airbus to develop a robotic arm that allows automation of testing phases on helicopter avionics.

These collaborative robots can work alongside humans to enhance performance testing. The robotic arm has a number of uses, for example, it can do a demonstration of an operational procedure in programming a destination. Thanks to the arm, trials can now be performed with other equipment which was not possible before.

This led to expansion of equipment capabilities, including touchscreen options, allowing Airbus to move a step closer to the future of helicopters. Customers benefit from better quality and a huge increase in productivity.

TELECOMMUNICATIONS, MEDIA & TECHNOLOGY

Unlocking next-generation ERP capabilities with SAP S/4hana

Smart Axiata, the leading mobile operator in Cambodia, wanted to modernize its ERP backbone and upgrade its finance and procurement processes to remain competitive and relevant in the market.

Together with Capgemini, Smart Axiata implemented SAP S/4HANA® to upgrade its legacy SAP system into a cloud-based, future-proofed platform that helps streamline the company's business processes. The enterprise-wide transformation program and migration from an on-premises ERP solution to the next-gen, cloud-based SAP S/4HANA® solution helped Smart Axiata unlock the digital capabilities necessary to support its growing needs while driving greater efficiency and cost savings.

“Digital transformation is key in driving our endeavour to become the digital champion in Cambodia, and Capgemini has helped bring that vision to life by laying the foundation with a next-generation platform that is simple, comprehensive, and possesses the ability to evolve as we grow.”

Kalyan Achyutuni

Chief Information Officer,
Smart Axiata

ENERGY & UTILITIES

E.ON SE

Pursuing a digital future

E.ON SE, global energy supplier and leader in the transition to a sustainable, clean energy system, embarked on a digital transformation program focused on improving the employee and customer experience.

Working with Capgemini, E.ON SE set up a digital transformation office to operationalize and govern digitalization activities across the organization based upon four key pillars: program management, portfolio, rollout, and change management.

One year later, E.ON's transformation took off, assuring that the organization will always have new opportunities to improve leveraging technology. With the digital transformation office in place, the organization will be able to identify new prospects for digital innovation and remain on the forefront of digital transformation within the utilities industry.

“Building a compelling digital transformation program at scale was critical to enabling E.ON objectives. The structure around the program helped to accelerate the progress and ultimately ensure the success.”

Matthew Timms

Chief Digital and
Technology Officer,
E.ON SE

Transforming demand planning and external manufacturing processes

Johnson & Johnson was looking to optimize its demand planning and external manufacturing processes to improve forecast accuracy, reduce inventory, and enhance the customer experience.

Johnson & Johnson partnered with Capgemini to create a central demand planning hub for running critical operations within its demand planning and external manufacturing processes.

Demand planning benefits include a 15% increase in forecast accuracy, increased process rigor, and over 98% accuracy of master data as well as improved decision-making and reduced distributor stock.

From an external manufacturing process perspective, the company benefits from a 97% Unit Fill Rate and a significant increase in Supplier On Time In Full (OTIF), 98% process adherence, 98% on-time completion of requests, and improved communication flow.

A cloud-based self-service platform for agility

Faced with changing needs, DLG, one of the UK's leading insurance companies, needed to become more adaptable and agile, but it found itself limited by antiquated technology, one-size-fits-all products, inflexible pricing, and slow rollouts.

Capgemini worked with the company to build a flexible, cloud-based, end-to-end technology platform that could support multiple channels, from price comparison websites (PCWs) to digital and direct outreach.

Capgemini integrated leading technology capabilities to create an ecosystem with hassle-free transactions, self-service opportunities, and easy access to customer support.

The new system now delivers better data insights and robust fraud protection. But more than that, Direct Line Group can now launch new products in a fraction of the time, providing the agility to compete in the highly contested PCW marketplace.

FOUR SEASONS

Reimagining the finance and accounting function

Four Seasons, the hospitality leader, wanted to enhance and standardize its existing, decentralized finance processes to drive efficiency and be able to focus on higher value-added and guest-facing activities. Capgemini helped Four Seasons optimize, standardize, and automate its finance processes and also create an effective multilingual delivery center.

Following its successful transformation, Four Seasons has achieved faster, more efficient, and more effective transactional processes, resulting in greater responsiveness and an improved overall customer experience. With automated processes, property level teams can now focus on strategic activities and giving guests an extraordinary experience every time they stay at one of their hotels.

PUBLIC SECTOR

HMRC

Helping rapidly support employers during a pandemic

As the COVID-19 pandemic began to take its toll on United Kingdom citizens and the economy, Her Majesty's Revenue & Customs (HMRC) asked Capgemini to help rapidly implement a digital solution enabling employers across the country to furlough rather than release employees. Capgemini worked on a program that would enable the rapid payment of grants to employers, delivering within a month a cloud-based digital product that would typically require up to a year to launch.

The program has supported 11.6 million jobs, with £67.4 billion paid to 1.3 million employers.

Passion for sport

Together we are transforming tomorrow

We engage in sport not just because of our shared passion, but because we know it can make a difference.

Sport provides a platform to apply our expertise, to use the power of transformative technology and innovation to achieve true impact and value. We want to help sports communities get more value as fans and customers, as participants and global citizens who demand and deserve a better world.

We also know the vital role sport plays in society. We believe that sport can help transform our future. Sport unites people in a way that little else does.

We use our sports partnerships to unite, to innovate and to transform. Sport plays a major role in articulating our vision that together we are transforming tomorrow.

37th America's Cup in Barcelona

Cutting-edge technology and sheer team spirit

Global and technology-driven by nature, the America's Cup is one of the most iconic and prestigious events in sports.

With technology innovation, sustainability, high performance and team spirit at the heart, it embodies many of the Group's values, and makes for a natural fit with our sports sponsorship portfolio.

As part of our new partnership, we will develop an unprecedented technology enhancing the sporting performance and fan experience of this year's competition.

"Global and technology-driven by nature, this prestigious sailing tournament – more diverse and sustainable than ever this year – embodies many of the group's values."

Aiman Ezzat
CEO of Capgemini

Passion for rugby

Worldwide partner of rugby world cup france 2023 and world rugby's global digital transformation partner

Rugby has been in our DNA and our company culture since the very beginning, and we share the rugby community's values of passion, team spirit, and diversity.

Rugby is a team sport in which you can't accomplish anything without the rest of your teammates."

Serge Kampf
Founder of Capgemini

We're Rugby in its efforts to transform the sport. Whether that is through vital technological solutions at the France 2023 Rugby World Cup, creating a more inclusive pathway for female leaders in rugby, or helping to blaze the trail for a more sustainable future. Rugby's transformation is ongoing, and we're excited to play our role in enabling solutions that drive long term value for the future of the sport.

Capgemini, part of the Ryder Cup family

Six-year partnership helping advance golf across the globe

Golf is a sport born in innovation, from its early inception in the Middle Ages through multiple transformational eras. It continues to be a leader in sports tech innovation.

Our partnership with the Ryder Cup, one of the world's most unique sporting events, aligns perfectly to our organization and our focus on building and celebrating talent, team spirit, precision and high performance.

Peugeot Sport

Together we are transforming tomorrow

Motorsport is the world's most transformative sport, navigating complex technologies, rule changes, and environmental innovation. It is a constant platform for progress and performance. Our partnership with Peugeot sport plays a key role at the heart of the FIA World Endurance Championship program, driving transformation with advanced digital tools and analytics to enhance the performance of the team and the PEUGEOT 9X8.

OFFICIAL DATA INTELLIGENCE PARTNER

A nobel international partner

Three-year global partnership with nobel prize outreach to support innovation and science

As a Nobel International Partner, Capgemini leverages its deep expertise in innovation and technology to support a rich program of outreach events across the globe.

These include the Nobel Prize Dialogues – regular events that bring Nobel Prize laureates, scholars, students, inventors, decision makers and other great thinkers together with the public to discuss solutions to some of the world's most pressing issues.

These events aim to promote fact-based decision-making, stimulate dialogue, and inspire people worldwide to build an inclusive and sustainable future fostered by innovation.

today

The rise of an entrepreneurial spirit

- Serge Kampf founds Sogeti, an IT services company, in Grenoble
- First acquisitions with the purchase of CAP (France) and Gemini Computer Systems (USA)

Expansion

- Becomes Cap Gemini Sogeti, the European leader in IT Services
- Launches in the US market and is listed on the Paris Stock Market

Pursuing leadership

- Acquires a variety of leading European IT services companies
- Name changes to Cap Gemini

Emergence of a global champion

- Acquires Ernst & Young
- Multi-national contract with General Motors to develop client/server systems in 42 countries
- Opens first offshore delivery center in Mumbai

New horizons

- Paul Hermelin becomes Group CEO
- Sogeti name returns with creation of a subsidiary specializing in local IT services
- Signature of one of the largest outsourcing contracts in company history with UK's Inland revenue
- Launch of Capgemini Invent, a new line of services dedicated to digital innovation and consulting

A business & technology partner

- Aiman Ezzat becomes Group CEO
- Launch of Capgemini Engineering (ex Altran acquired in 2019)
- Launch of our company purpose
- 2023, the year of sports sponsorship for Capgemini putting its technological expertise at the service of Rugby World Cup; Ryder Cup, Peugeot Sport and the America's Cup.

About Capgemini

Capgemini is a global business and technology transformation partner, helping organizations to accelerate their dual transition to a digital and sustainable world, while creating tangible impact for enterprises and society. It is a responsible and diverse group of 340,000 team members in more than 50 countries. With its strong over 55-year heritage, Capgemini is trusted by its clients to unlock the value of technology to address the entire breadth of their business needs. It delivers end-to-end services and solutions leveraging strengths from strategy and design to engineering, all fueled by its market leading capabilities in AI, generative AI, cloud and data, combined with its deep industry expertise and partner ecosystem. The Group reported 2024 global revenues of €22.1 billion.
